PROFESSIONAL SUMMARY

Software engineer (CS Honors, Cloud Computing) with hands-on full-stack project experience building and consuming REST APIs across Node.js, TypeScript, PostgreSQL, and React. Built TeamOS, a multi-tenant SaaS platform with a modular monolith backend, Redis-backed async job processing, and a React frontend integrated via TanStack Query. Strong in data structures, algorithms, and relational database design; comfortable owning features end to end from schema to API to UI, with Docker and AWS exposure.

EDUCATION

Bachelor of Science (Honors) in Computer Science (Specialization: Cloud Computing) **2027**
MIT – World Peace University, Pune CGPA: 8.37

Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Web Technologies, Computer Networks, Operating Systems

PROJECTS

TeamOS – Multi-Tenant SaaS Project Management Platform | Node.js, TypeScript, Express, PostgreSQL, Prisma, Redis, Socket.IO, React

- Architected a scalable modular monolith backend with workspace-scoped tenant isolation across 12 domain modules
- Designed RESTful APIs with a layered controller-service-Prisma architecture, using Zod validation and Better Auth
- Built async job processing with Redis/BullMQ and real-time collaboration using Socket.IO
- Integrated a React 19 + TypeScript frontend with backend APIs via TanStack Query for async data fetching
- Containerized the full environment with Docker and Docker Compose for consistent setup and deployment readiness

University Management System (Frontend | Backend) | Node.js, Express.js, PostgreSQL, Prisma, React

- Developed a full-stack system with separate frontend and backend architecture
- Designed and built RESTful APIs using Node.js and Express for managing students, courses, and records
- Integrated PostgreSQL with Prisma ORM for structured data modeling and efficient database queries
- Secured user authentication and session handling using JWT and bcrypt password hashing
- Structured backend using routes, controllers, and middleware for scalability

CoinWave – Cryptocurrency Dashboard | React, TypeScript, Vite, Tailwind CSS, Chart.js

- Built a modular dashboard displaying real-time cryptocurrency data using external APIs
- Implemented asynchronous data fetching and state-driven UI updates across components
- Developed interactive charts for price trends and market insights
- Designed multiple UI modules such as trending coins and analytics panels

AirSight – AQI Prediction System | Python, Pandas, Scikit-learn, Matplotlib

- Built a regression model to predict air quality index using environmental and industrial data
- Engineered features and trained models using Scikit-learn, visualized trends and insights with Matplotlib

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, SQL, C/C++
Frontend: React, TanStack Query, Tailwind CSS, HTML, CSS
Backend: Node.js, Express.js, REST APIs, Redis/BullMQ, Socket.IO, JWT/Auth, Zod
Databases & ORM: PostgreSQL, MySQL, MongoDB, Prisma
Cloud: AWS (EC2, S3, RDS, DynamoDB, Lambda, Elastic Beanstalk, ELB)
Tools: Git, GitHub, Docker, Docker Compose, Vite, MySQL Workbench, Figma
